Executive Summary
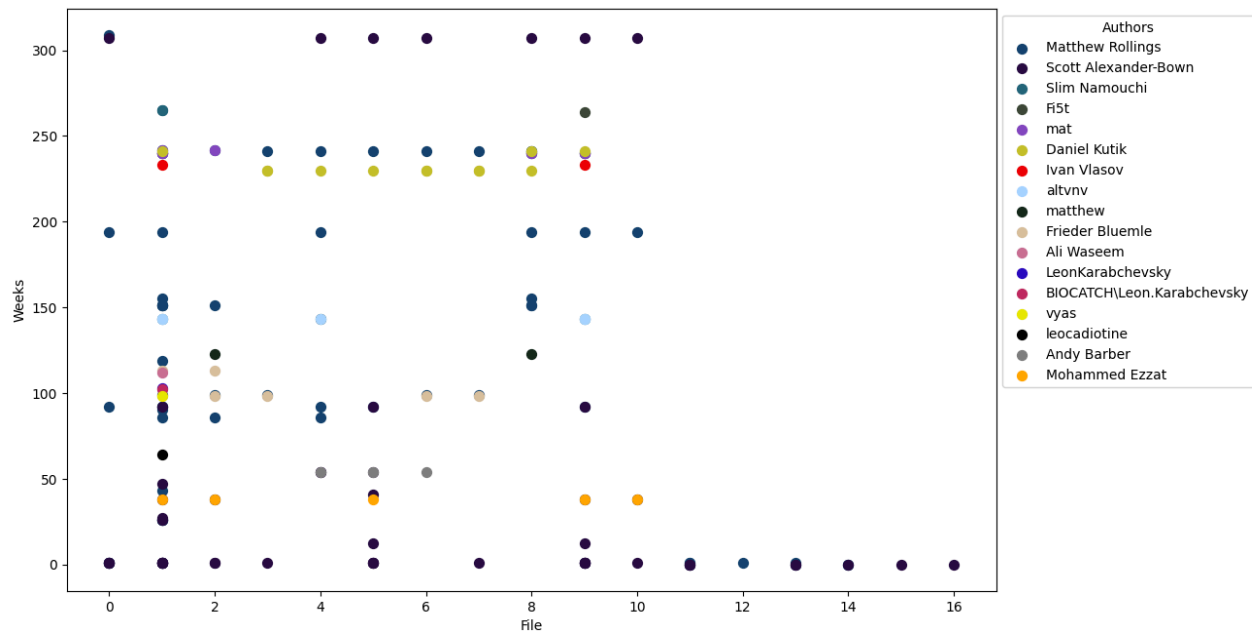

This report takes a look at the work distribution for the scottyab/rootbeer project over the project lifetime. Below is a graph showing the 17 different source files (.java files) in this project along with who touched those files in a given week.

Figure 1: Collaboration Graph

Observations

Looking at the graph, we can see that not all project contributors have done the same amount of work. Scott Alexander-Brown (project repository owner) and Mathew Rollings are the top two contributors of this project. These two individuals have touched files in the project throughout the entire project lifetime. Conversely, LeonKarabchevsky and Slim Namouchi have not been active, one-on-one meetings should be scheduled with these two individuals to discuss their poor performance. Lastly, files 11 to 16 have not been touched since the creation of the project meaning they are in a good stable state.

Helpful Git Commands

The most helpful command was git checkout -b <branch_name> which saved me from having to write two separate commands. The command I used the most was git add.
